

Upland Facility primarily receives and distributes petroleum products by marine vessels and land-based pipelines. There has been no rail traffic over the lines serving the facilities for several years. Some materials, such as blending components, oxygenates and other additives have in the past been received by truck; however, there was no product truck traffic in 1998 or 1999. Historically the truck rack has loaded up to 80 trucks per day, but such traffic has greatly diminished over the last five years. Only one truck was unloaded in 1997, 1998 and 1999, delivering diesel dye for injection into pipelines
